Portfolio and case study on request (figures verified live against the client account, 27 Sep 2026)

PROFESSIONAL SUMMARY

GoHighLevel and automation specialist, about two years in the platform. I own CRM migrations end to end and build the integration layer around them: Zapier, Kajabi, Webflow, Stripe, Meta Lead Ads, and the GoHighLevel v2 REST API where the no-code layer runs out. Delivered a full Zoho One to GoHighLevel migration for a US coaching company against a hard renewal deadline, then transitioned it to an on-call retainer with a written audit and handoff: 4,256 contacts, 116 workflows with 93 published, four custom objects, 1,291 opportunities across 9 pipelines, 242 custom fields, native five-tier checkout and 20 Zapier integrations. I script bulk work in Python with read-back verification, write the registry and runbooks the client team runs on, and configure deliverability end to end (SPF, DKIM, DMARC, domain warmup). Daily Claude user for workflow design, scripting and documentation.

CORE SKILLS

GoHighLevel: sub-account architecture, custom objects and associations, workflows and guard logic, pipelines, forms and surveys with conditional routing, calendars, funnels and checkout, memberships, email and SMS, LC Phone and IVR, dashboards, affiliate manager, A2P 10DLC, user roles and permissions

Integrations and API: GoHighLevel v2 REST API with private integration tokens, inbound and outbound webhooks, Zapier (Code steps, scheduled jobs, on-demand webhooks), Make.com, Kajabi, Calendly, Webflow, Stripe, Slack, Meta Lead Ads (pixel, Conversions API), Zoho CRM v2 API, audit-log forensics

Migration and data: field mapping, batch-ID tracking, tiered deduplication, notes and task history migration, pre-cutover archiving, reconciliation across non-nested sources, post-migration auditing

Scripting: Python (standard library), staged plan / canary / go / verify / restore runs, resumable ledgers, rate-limit aware retry, read-back on every write; HTML, CSS, JavaScript, MJML

Email and deliverability: lifecycle sequences (welcome, nurture, retention, exit, re-engagement), segmentation and list hygiene, SPF, DKIM, DMARC, dedicated domain warmup, bounce and complaint monitoring, pre-send QA

Documentation and ops: automation registries, build guides, runbooks, plain-language SOPs, client reporting, team training and handover, ClickUp, Notion, Google Workspace, Slack

PROFESSIONAL EXPERIENCE

GoHighLevel & Automation Specialist | Inspector Empire Builder (IEB Coaching)

April 2026 to present

US home inspection coaching company, five membership tiers. Remote contract, sole owner of the GoHighLevel build. Retainer from October 2026.

- Owned the Zoho One to GoHighLevel migration end to end: CRM architecture, member and lead data, communications, onboarding and retention automation, lead funnels, forms and applications, checkout, partner programme, analytics, final audit and team training.
- Designed the data model: Member and Partner custom objects associated to contacts, then Growth Metrics and Lead History (3,094 legacy leads, 20 monthly rollups) so a native dashboard shows two years of lead, call, consultation and conversion history.
- Built and maintain 20 Zapier integrations (15 active): Kajabi to GoHighLevel across five tiers with reverse course-grant webhooks, Calendly, Webflow, Stripe, Slack, Meta Lead Ads with pixel and Conversions API, plus scheduled maintenance jobs the CRM cannot run natively.
- Moved checkout from the course platform into GoHighLevel on all five tiers, three weeks ahead of the vendor fix estimate, so membership date, payment and tier are born clean at the point of sale.
- Recovered 27,627 customer notes across 2,738 contacts that a prior import had left behind; rebuilt exit history from 122 to 762 records; found and fixed a workflow silently erasing payment and membership-date fields on every new signup, verified at zero wipes after the fix across 677 members.
- Wrote 209 Python scripts (52,595 lines) against the GoHighLevel and Zoho APIs for migration, reconciliation, repair and audit, every one staged plan / canary / go / verify / restore with resumable ledgers and read-back on every write.
- Diagnosed platform defects with audit-log and API evidence and built the workaround each time: a custom-object action that reports success and writes nothing on dropdown fields (replaced with webhook to API), a duplicate-opportunity rule that ignores card status, integration writes that skip Contact Changed triggers, affiliate commissions never created. Eight written support tickets, four reproduced live.

- Ran the partner and sponsor programme migration: 68 partner records reconciled 26 of 26 against the legacy system, magazine and video submission pipelines, per-issue history on every partner, and a runbook plus training for the partner manager.
- Configured deliverability from scratch on a new sending domain (SPF, DKIM, DMARC, staged warmup): 0.78% bounce and 0.018% complaints on 16,984 delivered in the first authoritative read.
- Documented everything: an automation registry of 122 workflows with screenshots and write-ups, 278 HTML build guides, 53 handoff documents, a plain-language operations guide, and a weekly read-only audit script that measures every failure shape the team has ever reported before they report it.

Executive Assistant | GoScale

March 2026 to May 2026

UK automotive marketing startup. Remote.

- Managed the co-founder's inbox and calendar across Philippines and UK time zones, coordinated vendors and stakeholders, documented SOPs. The GoHighLevel engagement above began as a placement through this role.

Operations & Systems Architect (Executive Assistant) | The Creative Life by Matt Essam

October 2024 to May 2025

Remote.

- Built multi-step automations across ScoreApp, GoHighLevel and ClickUp that triggered task creation, pipeline movement and personalised email; architected the ClickUp workspace (dashboards, SOPs, wikis, content calendar) and documented 30+ workflows, cutting new-hire onboarding from two weeks to three days.

SEO Sales Assistant | LinkGraph

April 2024 to May 2024

Remote, seasonal.

- Maintained the GoHighLevel sales pipeline and supported the Director of SEO on client research and proposal drafting for high-ticket deals.

On-Call Personal Trainer | EZ Fit

January 2018 to present

Kickboxing and strength coaching.

- Client assessments, personalised programmes, progress tracking and structured accountability.

EDUCATION AND CERTIFICATIONS

BS Cybersecurity, AMA College of Calamba, 2021 to 2024, Dean's Lister

HubSpot Sales Development Representative • Google Cybersecurity (Level 1) • Google IT Support • Google Analytics 4 • Yoast SEO • No-Code Development (Go9x) • TESDA: SMAW Welding NC I, EIM NC II, RAC NC II (in progress)

WORKING NOTES

- **Honest scope:** about two years of GoHighLevel. Not a full-stack developer. No production n8n, no Snapshots sold, no Conversation AI or Voice AI bots shipped. Meta Ads is the technical layer (pixel, CAPI, event mapping, attribution, reporting), not media buying.
- **Availability:** UTC+8, full overlap with AU and UK hours, evening overlap with US mornings. Project-based, contract and part-time work preferred. Backup power and redundant internet.
- **References:** available on request.
